FEATURED INGREDIENTS & KEY BENEFITS

7 Types of Probiotics

Probiotics are live microorganisms that help restore the natural balance of gut bacteria in your digestive system. Different strains of probiotics have different effects; DigeZ includes 7 types of well-studied probiotics such as Lactobacillus Acidophilus, and Lactobacillus Fermentum to support your gut health. They are clinically proven to promote a healthy digestive tract and support a healthy immune system.*

Mixed Enzymes

DigeZ contains carefully selected digestive enzymes to support your gut health, especially for those with pancreas disorders. Digestive enzymes are complex proteins that help digest and break down food. They enable large macromolecules in the foods you consume to be broken down into smaller molecules, making sure that your guts can properly absorb nutrients.*

Fructooligosaccharide

Fructooligosaccharides (FOS) are oligosaccharides that are found naturally in plants. While often used as an alternative sweetener, FOS are also clinically tested to possess health benefits. These calorie-free, non-cariogenic, and soluble dietary fibers are considered prebiotics. They help feed the good bacteria in the intestines, providing benefits to your digestive system.*

Green Tea Extract

Green tea extract is the concentrated form of green tea that has been credited with a range of health benefits, especially supporting detoxification. According to recent studies, the extract can help your body increase the production of detoxification properties due to its high antioxidant content, freeing your body from toxins.*
